INSTALLING 'NAPA' on a PC running WINDOWS 64 bits. (*Windows 10 or 11*)

>>> Select the disk where you will install and run NAPA !

**** Step 1 ****
Unzip '**Simulate.zip**' with **7-ZIP**, using the password you have received.
Unzipped directory '**Simulate**' MUST be moved as '**\Simulate**' on the **root** of the disk. (Be careful, use the 7-ZIP software to avoid problems)

**** Step 2 ****
In '**.\Simulate\InstallDos**', launch '**_INSTALL.bat**' to install the NAPA environment and to create the shortcuts '**Napa Vineyard**' and '**Napa Vineyard – Mini**' on the desktop of your computer.

>>> '_INSTALL.bat' may ask to restart your PC (to set the variable NAPA_DISK).
If so, launch '_INSTALL.bat' again after the restart
to complete the installation.

**** Step 3 ****
Click on the icon '**Napa Vineyard**' or '**Napa Vineyard – Mini**' on the desktop.
It is preferable, though not mandatory, to change the appearance by selecting 'medium icons' or 'large icons'.

**** Step 4 **** -- TEST --
Click on '**Editor NotePad++ for Napa**'.
Open file '**\Simulate\InstallDos\TEST\test.nap**'.
Press 'Alt R' to start a simulation. The simulator NAPA should run.
You will then receive instructions to create your first plot.

**** Step 5 ****
It is now time to read the file '**\Simulate\NapaDos\Doc\Napa Teaser.pdf**'.
It can be accessed from the '**Napa Vineyard**' panel.

**** Step 6 ****
Last but not least, send your Email address to *yves.leduc.be@gmail.com*
You will be informed as soon as a new release is available or if a bug has been discovered. The author will be pleased to answer your questions.

ENJOY !
